

Safely take someone in the car/taxi bus

B&S Car restraint system

Universal

7-point harness

CE marking (93/42EEG)

Especially for hyperactive and/or mentally disabled people, B&S has a 7 point restraint system. The car seat fixation is equipped with a base belt that can easily be fasten on the backrest of the rear seat or to the car seat.

Children's version

The child is secured with the universal harness at 7 points. This harness is clicked with straps with side release buckles at the base belt. If the point between the legs is not desired this can be easily removed. The system can also be used in combination with a booster seat without backrest.

By default, the car restraint system is provided with lockable side release buckles. You have the choice to lock it or not.

Extra strong version

The extra strong version is equal to the child version of the car restraint system. The system consists of one 7-point harness and a base belt that can easily be fasten on the backrest of the rear seat or to the car seat. If the point between the legs is not desired this can be removed.

Users of this car restraint system often do not want to remain seated and release themselves. That is why the extra strong version is standard equipped with pin locks. The safety locks are provided of a cover plate with a small hole. With the supplied pen (or car key) the safety locks can be opened.

Use in several cars

Do you have two cars in which you want to take your son/daughter? Or is he/she being taken to school and/or day care by taxi (bus)? Then you can choose to purchase an extra base belt. The universal harness is used in both cars and the base belts can stay on the back seats/car seats.

Legislation and safety

For legislation about the carry of children we recommend you to check the rules of your government. .

- When using the B&S Car restraint system, the use of the standard 3-point safety belt is mandatory!
- The use of the B&S Car restraint system is at all times at your own risk.
- Only lock the lockable side release buckles if this is really necessary!
- We advise (especially when used by third parties) to coordinate with all parties involved that a person is being transported with a B&S Car restraint system.
- We strongly recommend fitting the supplied belt cutter in the car/taxi (bus)!
