

*Solutions to improve getting in and out of a car*

## **B&S Boarding aids**

**B&S Belek scissor lift**

**B&S Tip-up liftingseat**

*Getting in and out a car can be a problem for people when there is a physical disability or simply becoming elder. B&S has a some solutions to make this more easy.*

### **B&S Belek scissorlift**

Designed for people who need some help to get in and out the car at the right level and to stand up. And for wheelchair users to make a transfer from the wheelchair to the car seat. The universal unit is mounted under the original car seat and adjust the sitting level of the seat by continuous variable means. The Belek remains stable in every position, even in sideward direction.

- Rising height 17 cm, from 8 until 25 cm
- Maximum lift capacity of 150 kg
- Very stable on every height, even sideways
- Combination with mechanical/electrical slide and swivel base possible

### **Combining the Belek**

Standard the Belek is only a scissor lift, but in many cases it is possible to combine the unit with a mechanical or electrical slide (length 0.8 till 2.5 meter) and/or swivel base. It is possible to use the Belek with the original car seat as well as a special car seat like for example ASS, Scheel or Recaro.

## B&S Tip-up lifting seat

The Tip-up lifting seat helps you effortlessly to come from seating to standing position, and of course the other way around. The system consists of an electric riser column, equipped with seat base and foldable seating board.

The seatboard is available in four sizes. With the seatboard unfolded, you can sit on it. Press the button on the remote control and the riser does the rest. You are taken to the desired height. Standard the Tip-up lifting seat has a height adjustment of 30 cm, but a height adjustment of 50 cm is also possible.

The Tip-up lifting seat is also often used by wheelchair users as transfer facility. From wheelchair to carseat and the other way around. Therefore there are next to the standard seatplate of 12.5 x 35 cm also seatboards available of 20 x 35, 25 x 35 and 30 x 35 cm. This ensures that the gap between carseat and wheelchair is covered.
